INDEX TO VOL. XXII.

ABBOTT, J. F., and A. C. LIFE. Galvanotropism in bacteria, 202.
Anæmia of glands and muscles, resuscitation, 51.

BECHT, F. C. See CARLSON, GREER, and BECHT, 104.
BECHT, F. C. Some observations on the nature of heat paralysis in nervous tissues, 456.
BENEDICT, S. R. The influence of salts and non-electrolytes upon the heart, 16.

CARLSON, A. J. Comparative physiology of the invertebrate heart. — X. A note on the physiology of the pulsating blood vessels in the worms, 353.
CARLSON, A. J., J. R. GREER, and A. B. LUCKHARDT. Contributions to the physiology of lymph. — V. The excess of chlorides in lymph, 91.
CARLSON, A. J., J. R. GREER, and F. C. BECHT. Contributions to the physiology of lymph. — VI. The lymphagogue action of lymph, 104.
CARLSON, A. J., and J. G. RYAN. The diastase in cat's saliva, 1.
Contractility, fibrillar, 75.
Contractile processes related to ions, 75.
CROHN, B. B. See WEINGARTEN and CROHN, 207.

DIASTASE in cat's saliva, 1.

FARADIC stimulation, calibration of inductorium, 116.
Faradic stimulation, variable factors, 61.
FISHMAN, C. See HALE and FISHMAN, 32.

GALVANOTROPISM, in bacteria, 202.
Glycosuria, phlorhizin, affected by cold and mechanical exercise, 163.
Glycosuria, phlorhizin, relation to glutamic acid, 174.
——, relation to splanchnic fibres, 373, 397.
GREER, J. R. See CARLSON, GREER, and LUCKHARDT, 91.
GREER, J. R. See CARLSON, GREER, and BECHT, 104.
GUTHRIE, C. C. See PIKE, GUTHRIE, and STEWART, 51.
GUTHRIE, C. C. See RYAN and GUTHRIE, 440.

HALE, W. and C. FISHMAN. The excretion of bromides by the kidneys, 32.
Heart, influenced by salts and non-electrolytes, 16.
——, pulsating blood vessels in worms, 353.
——, refractory period, 133.
Heat paralysis in nerve tissues, 456.
HENDERSON, L. J., G. A. LELAND, JR., and J. H. MEANS. The behavior of muscle after compression, 48.
HEYL, F. W. See OSBORNE and HEYL, 362.
HEYL, F. W. See OSBORNE and HEYL, 423.
Hydrolysis of vignin, 362.
—— of vetch legumin, 423.
—— of chicken meat, 433.

KASTLE, J. H. On the use of nitrous acid, nitrites and aqua regia in the determination of the mineral constituents of urine, 411.

KASTLE, J. H. On the available alkali in the ash of human and cow's milk in its relation to infant nutrition, 284.
Kidney, excretion of bromides, 32.
——, secretion, indigo carmin, etc., 335.

LELAND, G. A., JR. See HENDERSON, LELAND, and MEANS, 48.
LIFE, A. C. See ABBOTT and LIFE, 202.
LILLIE, R. S. The relation of ions to contractile processes. — III. The general conditions of fibrillar contractility, 75.
LUCAS, D. R. Physiological and pharmacological studies of the ureter. — III, 245.
LUCKHARDT, A. B. See CARLSON GREER, and LUCKHARDT, 91.
LUSK, G. The influence of cold and mechanical exercise on the sugar excretion in phlorhizin glycosuria, 163.
LUSK, G. The production of sugar from glutamic acid ingested in phlorhizin glycosuria, 174.
Lymph, chlorides, 91.
——, lymphagogue action, 104.

MACLEOD, J. J. R. Studies in experimental glycosuria. — II. Some experiments bearing on the nature of the glycogenolytic fibres in the great splanchnic nerve, 373.
MACLEOD, J. J. R., and H. O. RUH. Studies in experimental glycosuria. — III. The influence of stimulation of the great splanchnic nerve on the rate of disappearance of glycogen from the liver, deprived of its portal blood supply or of both its portal and systemic blood supplies, 397.
MARTIN, E. G. A quantitative study of faradic stimulation. — II. The calibration of the inductorium for break shocks, 116.
MARTIN, E. G. A quantitative study of faradic stimulation. — I. The variable factors involved, 61.
MCLEAN, F. C. Further evidence of the presence of vaso-dilator fibres to the submaxillary gland in the cervical sympathetic of the cat, 279.
MEANS, J. H. See HENDERSON, LELAND, and MEANS, 48.
MEIGS, E. B. The application of McDougall's theory of contraction to smooth muscle, 477.
Metabolism, relation to muscular activity, 445.
——, proteid, affected by internal hemorrhage, 207.
Milk, nutrition influenced by alkali content, 284.
Muscle, behavior after compression, 48.
——, duration of contraction phases, 315.
——, structure, 477.
——, theory of contraction, 477.
Muscular activity and protein metabolism, 445.

NEILSON, C. H., and O. P. TERRY, The effect of potassium iodide on the activity of ptyalin 43.
Nerve conduction, relation of velocity to temperature, 179.
Nerve, glycogenolytic fibres in splanchnic, 373, 397.
——, heat paralysis, 456.

OSBORNE, T. B., and F. W. HEYL, Hydrolysis of chicken meat, 433.
OSBORNE, T. B., and F. W. HEYL. Hydrolysis of vetch legumin, 423.
OSBORNE, T. B., and F. HEYL. Hydrolysis of vignin of the cow-pea (Vigna sinensis), 362.
Oviduct, resection of, 357.

PEARL, R., and F. M. SURFACE. Resection and end-to-end anastomosis of the oviduct in the hen without loss of function, 357.
PIKE, F. H., C. C. GUTHRIE, and G. N. STEWART. Studies in resuscitation. — III. The resuscitation of the glands and muscles after temporary anæmia, 51.
Ptyalin, activity affected by potassium iodide, 43.

RUH, H. O. See MACLEOD and RUH, 397.
RYAN, A. H., and C. C. GUTHRIE. Control of spasms by asphyxiation, 440.
RYAN, J. G. See CARLSON and RYAN, 1.

SALIVA, diastase in, 1.
SCHULTZ, W. H. Studies in heart muscles. The refractory period and the period of varying irritability, 133.
SHAFER, G. D. Kidney secretion of indigo carmine, methylene blue, and sodium carminate, 335.

SHAFFER, P. A. Diminished muscular activity and protein metabolism, 445.
SNYDER, C. D. A comparative study of the temperature coefficients of the velocities of various physiological actions, 309.
SNYDER, C. D. The temperature coefficient on the velocity of nerve conduction (second communication), 179.
Spasms controlled by asphyxiation, 440.
STEWART, G. N. See PIKE, GUTHRIE, and STEWART, 51.
SURFACE, F. M. See PEARL and SURFACE, 357.

TEMPERATURE, relation to physiological and physical reactions, 309.
TERRY, O. P. See NEILSON and TERRY, 43.

URETER, physiology and pharmacology of, 245.
Urine, mineral constituents of, 411.

VASO-DILATOR fibres to submaxillary gland, 279.
Velocity of reactions affected by temperature, 309.
Vetch legumin, hydrolysis of, 423.

WEINGARTEN, F. S., and B. B. CROHN. The influence of internal hemorrhage on chemical change in the organism with particular reference to protein catabolism, 207.

THE AMERICAN

JOURNAL OF PHYSIOLOGY

EDITED FOR

The American Physiological Society

BY

H. P. BOWDITCH, M.D., Boston
R. H. CHITTENDEN, Ph.D., New Haven
W. H. HOWELL, M.D., Baltimore
FREDERIC S. LEE, Ph.D., New York
W. P. LOMBARD, M.D., Ann Arbor
G. N. STEWART, M.D., Chicago
W. T. PORTER, M.D., Boston

Vol. XXII.—No. IV.

Issued September 1, 1908

BOSTON, U.S.A.

1908

CONTENTS

On the Use of Nitrous Acid, Nitrites, and Aqua Regia in the Determination of the Mineral Constituents of Urine. *By J. H. Kastle* 411

Hydrolysis of Vetch Legumin. *By Thomas B. Osborne and Frederick W. Heyl* 423

Hydrolysis of Chicken Meat. *By Thomas B. Osborne and Frederick W. Heyl* 433

Control of Spasms by Asphyxiation. *By A. H. Ryan and C. C. Guthrie* 440

Diminished Muscular Activity and Protein Metabolism. *By Philip A. Shaffer* 445

Some Observations on the Nature of Heat Paralysis in Nervous Tissues. *By F. C. Becht* 456

The Application of McDougall's Theory of Contraction to Smooth Muscle. *By Edward B. Meigs* 477

The American Journal of Physiology is issued monthly. Each volume will contain about five hundred pages. The price of one volume sent postage free to subscribers in the United States and Canada is five dollars; to subscribers in other countries, five dollars and twenty-five cents. The price of Volumes One, Two, and Three will be six dollars to domestic subscribers, and six dollars and twenty-five cents to foreign subscribers. All subscriptions are payable in advance.

Subscriptions, manuscript, and all other communications should be sent to The American Journal of Physiology, Box 127, Back Bay Post Office, Boston, Mass., U.S.A.

Contributors will receive fifty copies of their papers free; additional copies may be obtained at cost.

Copyright, 1908, by W. T. Porter.

Printed by John Wilson and Son, at The University Press, Cambridge, Mass.

Entered at the Boston, Mass., Post Office as second-class mail matter, Feb. 11, 1903.
